

## The impact of Medicaid redeterminations on the uninsured rate

On April 1st, Medicaid's pandemic-era continuous enrollment policy began to sunset, kicking off a 14-month window for states to reassess their Medicaid rolls. In this week's graphic, we highlight new Congressional Budget Office [projections](#) showing the impact of Medicaid redeterminations on insurance coverage rates over the next decade for the under-65 population. **The Medicaid and Children's Health Insurance Program (CHIP) coverage rate is expected to drop from 31 percent of all Americans under 65 in 2023, to 27 percent in 2024.** Meanwhile, **after reaching an all-time low in 2023, the under-65 uninsured rate is projected to surpass nine percent in 2024 and climb to over 10 percent by 2033.** While over 15M Americans are expected to lose Medicaid coverage during redeterminations, a majority of those disenrolled will gain health insurance either through an employer-sponsored or non-group plan. **But over 6M people, nearly 40 percent of those losing Medicaid coverage, are projected to become uninsured**, erasing nearly half the progress the country has made since 2019 at lowering the uninsured rate.

### After Record Low, US Uninsured Rate Projected to Rise Amid Medicaid Redeterminations

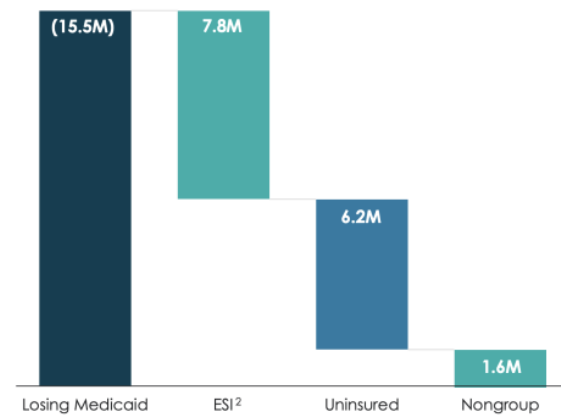

Forty Percent of Those Losing Medicaid Eligibility May Become Uninsured

Actual<sup>1</sup> and Projected Uninsured and Medicaid & CHIP Coverage Rates for People Under 65, by Year
